

v-Rx: A new approach to pharmacy benefits

Significant savings and enhanced member services

Innovative strategies to contain and reduce self-funded pharmacy costs

v-Rx powered by ScoutRx, the newest addition to the Välentz[™] ecosystem, is transforming the way self-funded employer groups provide prescription drug coverage for members. With concierge-style service and member advocacy, our unique, three-tiered suite of pharmacy benefit services enhances the benefits traditionally provided by a PBM. You will regain control of your pharmacy spend year over year – compared with traditional PBM solutions that base their savings on discounts, which provide no protection against ever-rising pharmaceutical inflation. The v-Rx three core strategies create long-term reductions in pharmacy benefit spend while delivering a one-to-one member experience and personalized level of support and advocacy that is unmatched in the industry.

Specialty Pharmacy

Alternative funding is used to reduce specialty drug costs by up to 100% and assure members never go without their medication.

Co-Pay Optimization

Our full-service co-pay card optimization program enhances group savings without any changes or disruption for individual members.

International Pharmacy

We deliver dramatic savings for many brand-name, domestically equivalent medications, including temperature sensitive items, through our Canadian retail pharmacy partner.
